CATT
Innovation Management
Linz, Austria

Dear Mrs Krenn,

I am writing to apply for the placement offer 5929 for my third year in Computer Science at « Haute École de la Province de Liège ». I am in my last year of study. In term of this, I will be awarded a bachelor degree in Industrial computing. My aim is to achieve an internship in the field of game development and the placement offer offered by your company would be a good preparation for next continuing my studies in that direction.

I practice programming for roughly 7 years. Since then, I have experienced a lot of different techniques and languages. I also had the opportunity to develop a lot of different projects in various areas like image processing, real-time processing, game and website (some of them were developed in a team) but my favourite kind of project is those in relation with game development. I am confident that my educational background is in keeping with your requirements.

I will also enjoy the opportunity of visiting Austria which is, as i heard from my friends, a wonderful land with a great historical background and lots of really beautiful landscape.

My greatest desire would be to integrate a motivated development team in the field of video game development as this is, in my opinion, the most interesting kind of project. Your placement offer seems to be exactly what I'm looking for.

I am highly motivated, hardworking and reliable, and I would particularly welcome the opportunity to work in a motivated team in the field of game development. I am confident that your team will benefit both from my enthusiasm and my abilities.

My institution is providing me with an ERASMUS funding.

I hope you will view my application favorably and I look forward to hearing from you soon. I can be reached at this email address ThomasVanGysegem@gmail.com

Yours sincerely,

Thomas Van Gysegem
